Education

- 2017–Pres **Ph.D. Student**, *Computer Science*, National University of Singapore, Singapore.
2010–2014 **Bachelor of Engineering**, *Computer Science*, Harbin Institute of Technology, China.

Experiences

- 2016–2017 **Research Assistant**, *Database Lab SoC@NUS*, Singapore.
Our team was interested in the dynamic graph analytics on various kinds of applications and was exploring to utilize different hardware hierarchies, e.g., GPU Accelerators and their combined architecture, to achieve better efficiency.
- 2015–2016 **Project Officer**, *Rolls-Royce@NTU Corporate Lab*, Singapore.
I took part in the research project that mainly focuses on the automatic vortex extraction and tracking in CFD data, which is an essential tool for the aerodynamic design of Rolls-Royce's jet engine.
- 2014–2015 **Algorithm Engineer**, *Alibaba Group*, Beijing.
I was responsible for the backend of the business logic layer of internet advertising delivery engine, which was mainly related to online user profiling and targeted ads indexing, retrieving and recalling.
- 2013 **Software Engineering Intern**, *Google Inc.*, Shanghai.
Our team was in charge of the development of backend transaction logic management of the Demand Side Platform, and my main contribution during the internship was the RetryAction module.

Publications

- **Mo Sha**, Yuchen Li, Bingsheng He, and Kian-Lee Tan.
Accelerating Dynamic Graph Analytics on GPUs.
International Conference on Very Large Data Bases (VLDB), 2018.
- Wentian Guo, Yuchen Li, **Mo Sha**, and Kian-Lee Tan.
Parallel Personalized Pagerank on Dynamic Graphs.
International Conference on Very Large Data Bases (VLDB), 2018.

Patents

- **M. Sha**, J. G. Liu, Y. P. Ke, E. Leonardi, and K. Menzies.
Effective Cross-section Extraction for Vortex Detection.
Rolls-Royce, UK, GB 1805001.3. (UKIPO), March 2018.

Awards

- **First Prize**, *the ACM/ICPC Asia Regional Contest*, Hangzhou, 2012.
- **The CCF Outstanding Undergraduate Award**, *CNCC*, Dalian, 2012.
